AFICEP Technical Meeting

"Elastomers and Automotive"

December 4, 2019

Elastomers are essential in the automotive world and their role is crucial to give our vehicles the qualities necessary for optimal use.

The properties of our elastomers are perfectly in line with the expectations of the automotive world: **flexibility, acoustic and vibratory comfort, durability, appearance.**

The evolutions of this line of business towards more autonomous vehicles, more connected, more respectful of the environment lead all the actors of our sector to more creativity to satisfy these new functionalities.

All the stakeholders are concerned by this emerging revolution: **manufacturers and distributors of raw materials, designers, processors and end users.**

The development of electric vehicles will have a considerable impact on the elastomer solutions that you will be able to offer in the near future.

As you can see, this is a sector in full evolution, in full revolution.

Anxious to make its own - though modest - contribution, the AFICEP decided to allow all the actors of the sector to express themselves during its next technical meeting whose theme will be mainly devoted to the Elastomers and the Automotive, with a focus on the electric vehicle.

You are an actor in this industry? Come share your testimony and make your voice heard.

This next technical day will be held on **December 4th** in a place that will be specified later.

Many thanks in advance to all of you for your active involvement in this event.

For the Technical Events Committee,
Philippe DABO

Call for Papers

ELASTOMERS AND AUTOMOTIVE

LAST NAME :

FIRST NAME :

JOB TITLE :

COMPANY NAME :
